

Mirrorlite glassless mirror procedure for correcting foam-touching mirror surface

- 1) Remove mirror from the wall or floor stand.
- 2) Support back of mirror by the aluminum frame around edges, using a second person helps.
- 3) With a gloved hand or covered with micro-fiber cloth push in from the face of mirror where defect is observed. A significant force must be applied, like a CPR compression, until the foam makes a snap, crackle, pop sound.
- 4) Remove any wrinkles with a heat gun and clean smudges with mirror cleaning kit.
